# PABLO LORENZO-EIROA

Expanding Dimensions Across Survey and Representation:  
Borromini, Bernini, Rainaldi and Pozzo

Architecture is struggling to be culturally relevant with the progressive expansion of new technologies, as they motivate New Emergent Disciplines. Architects, designers, historians and theoreticians should participate in the authorship of software, codes and interfaces that they use to survey, analyze, represent and ultimately originate a project, taking part of the development of new technologies which are now informing culture. The issue today is how to expand dimensions between survey, representation, "drawing" and "building"; or rather how to expand dimensions in an in:formed reality.
